Kartika Indah No. 19, Sri Meranti, Rumbai, Pekanbaru City, Riau 28266

Fresh graduate with a D4 degree in Information Systems from Caltex Riau Polytechnic, with experience gained through academic projects and an internship as a Web Developer. Skilled in designing and developing web-based applications, building responsive interfaces, developing backends, managing databases, and integrating REST APIs. Proficient in React.js, Laravel, Node.js, Express.js, MySQL, JavaScript, PHP, Python, and Flask. Experienced in developing web-based systems, from database design, feature development, and frontend-backend integration to application testing. Possesses problem-solving skills, analytical thinking, teamwork, and the ability to adapt to new technologies. Aims to build a career as a Web Developer and contribute to creating effective, responsive, and user-friendly web applications.

EDUCATION

Caltex Riau Polytechnic Pekanbaru

D4, Information Systems | GPA: 3.364/4.00

INTERNSHIP EXPERIENCE

PT Deco Internusa Pekanbaru

Web Developer, Intern

August 2024 – February 2025

- Developed and customized web-based applications according to the company's needs.
- Implementing responsive interface designs to ensure the application functions well on both desktop and mobile devices.
- Develop and customize front-end features to enhance the user experience and ease of use of the applications.
- Integrating front-end requirements with the back-end and database during the application development process.
- Conduct testing and debugging to identify and resolve issues in the applications.
- Collaborate in the development process and resolve technical issues throughout the project.

SKILLS

Soft Skills : Problem Solving, Analytical Thinking, Teamwork, Communication, Discipline, Responsibility, Adaptability

Hard Skills : HTML, CSS, JavaScript, React.js, Next.js, Laravel, PHP, Node.js, Express.js, Python, Flask, MySQL, SQL, REST API, API Integration, Responsive Web Development, Database Management, Software Testing

Software : Git, GitHub, Postman, Visual Studio Code, Nginx, Microsoft Word, Microsoft Excel, Google Docs, Google Sheets

PROJECT

Design and Development of an Information System for Scaffolding Service Ordering and Management

- Designing and developing a web application to support the ordering, rental, and management of scaffolding services.
- Analyze system requirements based on business processes and user needs.
- Designing the ERD, database structure, table relationships, and application workflow.
- Develop features for product management, customer orders, offline orders, payments, notifications, and rentals.
- Integrate the frontend, backend, and database to support integrated data management.
- Conduct system testing and evaluation based on test results and user feedback

Inventory Management Information System

- Developing a web application to support integrated management of inventory, incoming goods, outgoing goods, suppliers, and categories.
- Designing and developing the frontend and backend with an application structure separated by components, services, controllers, repositories, and routing.
- Designing the database structure and data relationships using Prisma ORM to support structured inventory data management.
- Developing features for managing items, categories, suppliers, incoming goods, outgoing goods, dashboards, and reports to support the inventory administration process.
- Implement an authentication and authorization system to manage user access and protect the application's features and data.
- Integrate the frontend, REST API, backend, and database, and perform functional testing to ensure that every feature operates as intended
